# DATA & DIGITAL ECONOMY

As the digital economy accelerates, Rajah & Tan Asia is ready to take on this change with our Data & Digital Economy services.

We hope to position ourselves as the region's first choice in legal solutions providers and thought leaders in the Data & Digital Economy space and the new Metaverse.

This is achieved with the strategy of merging core Data & Digital Economy skillsets with the various specialist practices across Rajah & Tann's Corporate and Disputes practices, drawing on the strengths and expertise of each lawyer to provide clients with multi-disciplinary, multi-legal solutions on a scale and depth few other firms can meet internationally.

Rajah & Tann Asia transforms to be your go-to regional team for all data and digital economy matters.

Acts for an impressive roster of high-end domestic and multinational social media, electronics and telecoms companies. Often provides advice in relation to cybersecurity issues.”*

**Chambers Asia Pacific**

# ARTIFICIAL INTELLIGENCE & DATA ANALYTICS

The rise of artificial intelligence (“AI”) and data analytics is profoundly transforming business models. AI encompasses data analytics, natural language processing, machine learning, Big Data and IoT. AI solutions deployed by our clients extract patterns from large sets of data, derive insights, and offer predictions based on such information.

These wide-ranging solutions and business processes enable our clients to integrate information, analyse data and use the resulting insights to improve their decision-making. Many industry players have been making use of these fast-evolving technologies to their advantage. However, along with these advantages also come their own set of legal challenges in areas such as compliance, risks, ethics, privacy, manipulation, data governance, and human-robot interaction. These new technologies and business models also require new strategies from a legal and compliance standpoint.

As we approach a bifurcated future in both the real and the metaverse, both AI and machine learning will play a key role in the development of real-life decision-making processes and the virtual world.

Legal expertise in data management and security, as well as both intellectual property and intangible asset protection, will be essential to clients dealing in this space.

Led by a team of highly experienced lawyers who are recognised thought leaders in this nascent field, together with Legal Engineers from our Rajah & Tann Technologies InnoLex team, we provide multidisciplinary solutions to meet demands in this rapidly evolving space and stand ready to guide you through every step of your AI journey.

Whether you are a company that is selling an AI or data analytics solution, a company looking to invest in an AI solution to drive your business forward, or even a company that is utilising AI and data analytics in your business operations, we are well placed to provide end-to-end legal support and to guide you through every step of your AI journey.

# Artificial Intelligence & Data Analytics Services

Our areas of focus comprise of the following, but are not limited to:

## Regulatory & Compliance

The team has a strong understanding of the regulatory environment, in particular the AI ethics & governance framework that are put in place across the region. We are well-versed in assisting clients with assessing their regulatory obligations and implementing the necessary compliance measures in AI systems and solutions. This includes antitrust and consumer protection advice, as well as addressing privacy and data security issues. This experience places us at an advantage to provide practical and implementable legal advice for our clients.

## Data Analytics

Working in tandem with Rajah & Tann Technologies Pte. Ltd. and LegalComet, our team of experts offers clients Legal Engineering advisory services including electronic discovery (ediscovery), forensic technology, and data governance.

Through identifying, preserving, and collecting data, LegalComet can process such data into a structured format for effective review. By utilising AI in our solutions, we are able to analyse data to discover purposeful and valuable insights for you.

## Monetization & Intangible Assets Protection

The team works closely with our clients to devise legal strategies by enforcing IP rights in AI and data analytics, solutions such as IP protection of data systems and the data assets themselves, patent coverage, copyrights, trademarks, and trade secret protection, to prevent infringement and misappropriation.

In data analytics and data monetization exercises, businesses that are in the process of securing adequate IP rights over such data assets will be able to benefit from the pragmatic and commercial advice provided by the team.

## Data Governance & Cybersecurity

Through Rajah & Tann Cybersecurity Pte Ltd, we have a one-stop shop pairing of legal and technical services to provide seamless cybersecurity and data protection solutions to clients.

Our legal engineering team has a strong understanding of the AI ethics and governance framework and is able to provide end-to-end legal and technical support to assist clients in compliance, legal proceedings, and government investigations.

## Accolades

# CLOUD, DATA CENTRE & INFO-COMMUNICATIONS

The revolution of technology has brought about rapid changes in the world of construction, giving rise to new digital infrastructure projects such as data centres, smart buildings and telecommunications infrastructure.

Our team at Rajah & Tann draws expertise from our market-leading practices to assist clients throughout the entire lifecycle of complex infrastructure projects and service provisioning in the technology space.

We are the go-to firm to provide expert commercial and legal advice on all aspects of telecommunications and technology infrastructure – including hardware, software, facilities and structures that support the delivery of connectivity, business systems and IT-enabled processes. We also regularly advise on data centre solutions for investors, developers, operators, and users participating in the data centre and communications infrastructure realm.

To stay ahead of the rapid technological developments in relation to the future of the Metaverse, we recognise that it requires a higher need for connectivity, storage space, 6G zero latency, and massive data centre development.

We have broad expertise to guide and advise our clients from IT procurement to various stages of technology and communications infrastructure projects to advance alongside these technological developments.

Amidst all of these, we ensure that our clients stay compliant with current and upcoming regulations.

# Cloud, Data Centre, and Info-Communications Services

## Infrastructure

We have advised extensively on technology infrastructure projects across South East Asia, having acted for multinational leading technology companies as well as traditional powerhouses and specialised technology clients.

We provide advice at the earliest pre-construction phases ranging from project feasibility to financing to contract drafting.

We have advised private bidders and governments in the various stages of the bidding of Public-Private Partnership (PPP) projects for public technology infrastructure and have also assisted in the preparation and/or assembly and review of the documents and submissions necessary for the bidding or award of such projects.

Our work involves assisting in preparing, negotiating, and advising on concession agreements, Build-Operate-Transfer (BOT) / Build-Own-Operate-Transfer (BOOT) contracts, and other types of project development agreements.

We also advise on project agreements such as Engineering, Procurement and Construction (EPC) contracts, Operation & Maintenance (O&M) agreements, and offtake agreements.

## Information Systems Procurement

Our broad experience and in-depth knowledge since the start of the dot com have enabled us to help numerous state-level IT major organisations in drafting and negotiating complex information systems procurement contracts based on shared services, outsourcing, and PPP models.

We set the benchmark as pioneer draftsmen for various cloud computing contract structures, both from a vendor and a consumer perspective in the Asia Pacific region and in the rest of the world.

## Regulatory Compliance

Our team of experts can inform on the regulatory concerns relating to your project, and the necessary services and platforms your business requires. Working regularly with regulatory authorities and government agencies, we understand the factors necessary for successful approvals and are promptly in the know of new developments in regulations.

We also leverage RegTech (regulatory tools and processes assisting in regulatory compliance) to enhance the speed, minimize the risks and reduce the cost of regulatory compliance.

# Cloud, Data Centre, and Info-Communications Services

## Corporate Real Estate

Our Corporate Real Estate lawyers are equipped with the right technological knowledge to provide relevant advice on property due diligence and advisory services concerning all property issues including applications to the relevant governmental and statutory authorities on stamp duty remissions and approvals for subleasing, subdivision, change of use, land use and easements.

The team also represents landlords and tenants in leasing and subleasing transactions for various types of commercial and industrial properties. We are very familiar with the issues relating to technology infrastructure such as state leases, long-term leases, build-to-suit arrangements, turnkey projects, and sale and leaseback agreements.

## Cloud, Data Centres

Every business has been affected by the rapid evolution of technology, data centres included. The move to cloud computing has proved to be a cost-effective alternative to setting up and running a data centre.

The team combines depth of experience and knowledge across a broad range of practice areas in order to provide extensive capabilities in all aspects of the cloud, data centre ecosystem.

This includes advising on Cloud Service Agreements, Cyber Security and Data Privacy, Cloud Services Infrastructure and compliance with the regulatory regime, to name a few.

Cloud Providers need to ensure that the necessary data security measures are in place to safeguard the data that is stored or processed.

In this respect, we work in tandem with legal tech specialists from Rajah & Tann Cybersecurity to provide:

Limiting the liability for security or risks in clouding is an important issue and you can now have a one-stop shop access to both legal and cybersecurity expertise with Rajah & Tann.

# CYBERSECURITY & CYBERCRIME

Cybersecurity & cybercrime have always been key areas of concern in the digital world. As we marvel at new opportunities in the Metaverse, businesses must be prepared to face new and advanced threats of Meta-cybercrimes where next level massive attacks make current ones seem like systemic tests for the dangers to come.

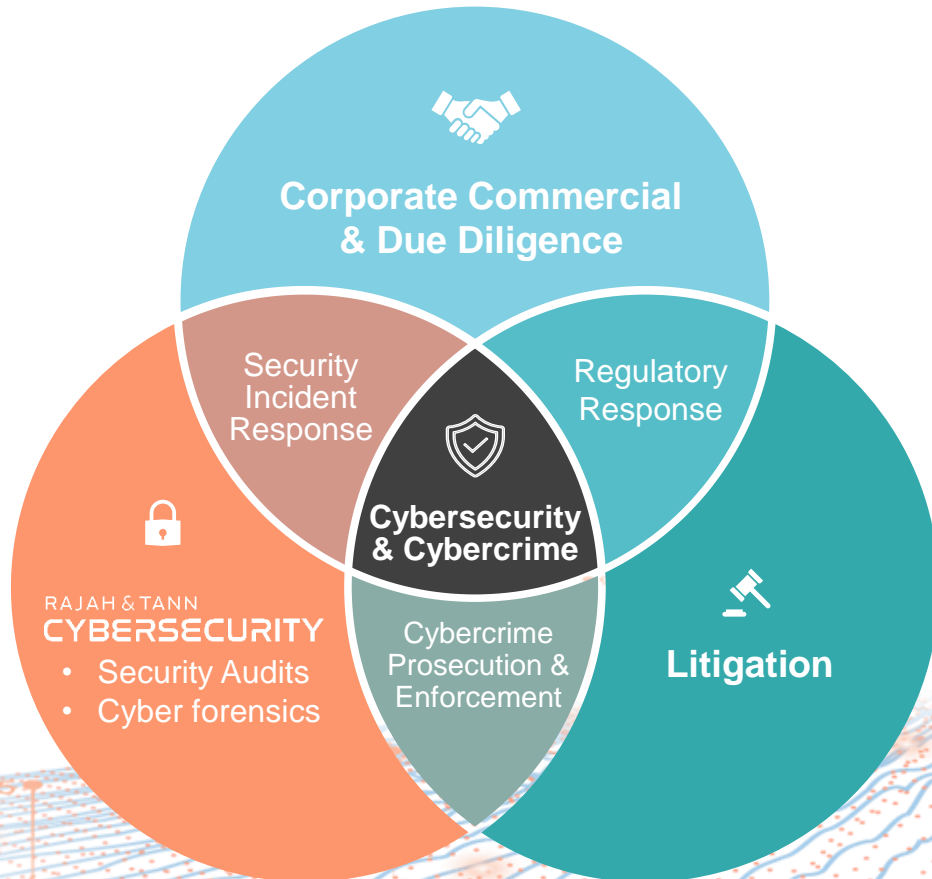

Our Data & Digital Economy expertise in cybersecurity allows us to help clients leverage the value of data responsibly and safeguard the confidentiality of sensitive data. Our market-leading lawyers work in tandem with legal tech specialists from Rajah & Tann Technologies and Rajah & Tann Cybersecurity. in the creation of new policies, cross-party reliance and systems, meta-security standards and protocols, and next-gen compliance procedures to ensure that security is maintained while preserving the user experience. This synergistic collaboration provides technical audit, forensic and investigation services to complement the legal services that are provided by our technologically savvy lawyers.

We also provide multi-disciplinary data breach services and 24-hour emergency response teams ready to assist our clients as may be required.

Our team is the one-stop shop for all data or cybersecurity matters, giving clients the head start to solutions vital in the Metaverse.

## Customisable & Scalable Suite of Services

We provide our clients with a holistic solution designed to assist in preventing cyberbreaches and in effectively responding to a cyberbreach. Our services can be customised to assist large organisations as well as small and medium-sized enterprises across every industry.

# Cybersecurity & Cybercrime Services

Our end-to-end service offerings cover the entire risk management lifecycle in your operations and ensure they maintain a robust cybersecurity solutions strategy. Working with highly experienced technical experts in the field of security services and consultancy, we are a market leader in providing comprehensive pre and post-incident security services. Our team also includes specialists with backgrounds in investigations and a former Deputy Public Prosecutor who will be able to handle any cybercrime incidents. Our services include:

## End-to-end Cybersecurity & Cybercrime Service Offerings

### Pre-Incident

- Privacy Impact Assessment (PIA)
- IT Architecture Security Review
- Configuration Audit
- Threat Modeling and Risk Assessment
- Cybersecurity Policies Development

# DDE DISPUTES & CRISIS MANAGEMENT

Our dynamic litigation team has been pioneering cutting-edge data and technology disputes, offering a multidisciplinary approach to assist clients of every size and stage with integrated counsel. We have navigated this terrain and guided clients in the asset recovery, forensics, cybersecurity, technology, entertainment, software, marketing, media, and gaming industries, across the entire spectrum of the digital space.

## Our Services

The digital wave has brought about major transformation to businesses and commerce. The metaverse realm has also open doors to new kinds of disputes including data assets, avatar legal rights, NFTs, meta interdependency disputes and token specific disputes.

Our team of tech litigation specialists are equipped to guide clients as they navigate this new frontier, with emphasis on:

- Digital asset and cryptocurrency tracing and recovery
- Privacy and data use and governance disputes
- Software and intellectual property disputes

- Mergers & acquisitions disputes, joint ventures disputes
- Digital financing disputes
- Digital payment processing and token disputes
- Technology and telecoms infrastructure disputes
- Digital trade and intangible asset related disputes

Working closely with the Rajah & Tann Technologies Group of companies, our lawyers together with our technical professionals provide clients with cutting edge legal service delivery models to meet the demands and challenges of the digital economy.

## DDE Disputes & Crisis Management Services

### Cyber Fraud Investigations

Our team is at the forefront of cyber fraud investigations, obtaining the first reported Mareva injunction in Singapore against “persons unknown” to freeze cryptocurrency.

In the borderless and anonymous nature of the digital sphere, there are often challenging issues of jurisdiction, source, and credibility. Working in tandem with Rajah & Tann Cybersecurity Pte. Ltd. and Rajah & Tann Technologies Pte. Ltd., we deliver services in close collaboration with other professionals in anti-corruption, investigations and digital forensics, forensic accounting and insolvency. The team has forensics capabilities to provide blockchain analysis and asset recovery work for all aspects of fraud in the digital space.

### Digital Assets & Cryptocurrency Tracing & Recovery

As the use and exchange of digital assets and cryptocurrencies surge worldwide, wrongdoers are employing increasingly sophisticated techniques to obscure transfers and obstruct tracing exercises.

Our specialists constantly adapts their tracing and recovery tools to ensure we offer an effective set of legal mechanisms to help clients seek redress and recovery of their digital assets, including tracing and recovering cryptoassets, tokens, or their equivalent value. The team also represents clients in recovery proceedings to prevent asset dissipation.

### Alternative Dispute Resolution

Alternative dispute resolution (“ADR”) is an effective problem-solving tool increasingly used in lieu of litigation, the benefits being the confidentiality, flexibility, relative speed, and potential time and cost savings.

This is particularly important in the ever-changing digital sphere where swift and commercial resolutions often take priority.

The team has notable expertise and is highly experienced in managing disputes both domestically and globally through ADR. Our services include arbitration, mediation, negotiation, and settlement conferencing.

The Legal 500 Asia Pacific (2020)

# DDE MERGERS & ACQUISITIONS

Whether you are seeking to invest in, purchase assets or shares of a technology company, or acquire new digital capabilities, our team of specialist tech lawyers is here to provide effective and strategic legal support across the entire spectrum of technology-related M&A transactions.

We have a thriving Tech M&A practice representing investors, giant corporations, startups and emerging enterprises involved in all facets of the Data & Digital Economy. Our lawyers have acted frequently on either side of the table in acquisitions /divestments and investments into growth-stage companies operating in the disruptive, cutting-edge fields of Blockchain, Cryptocurrency, Agri-FoodTech, FinTech, DeepTech, LegalTech and MedTech, alongside more “conventional” technology companies doing social networking, gaming and e-commerce. Our team also assists in the set-up of funds/fund formation and advises on governance protocols that are involved in investing in technology companies.

We understand that the traditional approach may not work for M&A transactions in the digital sphere, and we pride ourselves on providing the depth of knowledge that is unique to acquisitions/divestments and investments in tech companies and/or their related assets.

Today, we are on the cusp of the Metaverse as digital worlds and augmented reality continue to be developed, and technology companies are envisioning various types of Metaverse platforms. Taking into account this new digital reality concept, M&A activity and collaboration between Metaverse builders and companies now require Meta-specific M&A checklists and indicators to ensure smooth integrations.

Our legal and technical specialists are highly adept at providing practical advice on complex issues that often arise in Tech M&A and Meta Commercial transactions, from conducting intellectual property and cybersecurity due diligence to drafting transitional service agreements, invention assignment agreements, and designing data protection policies.

Our impressive roster of clients includes high-profile technology companies which are a testament to the caliber of our team and the crucial role we play in the technology space.

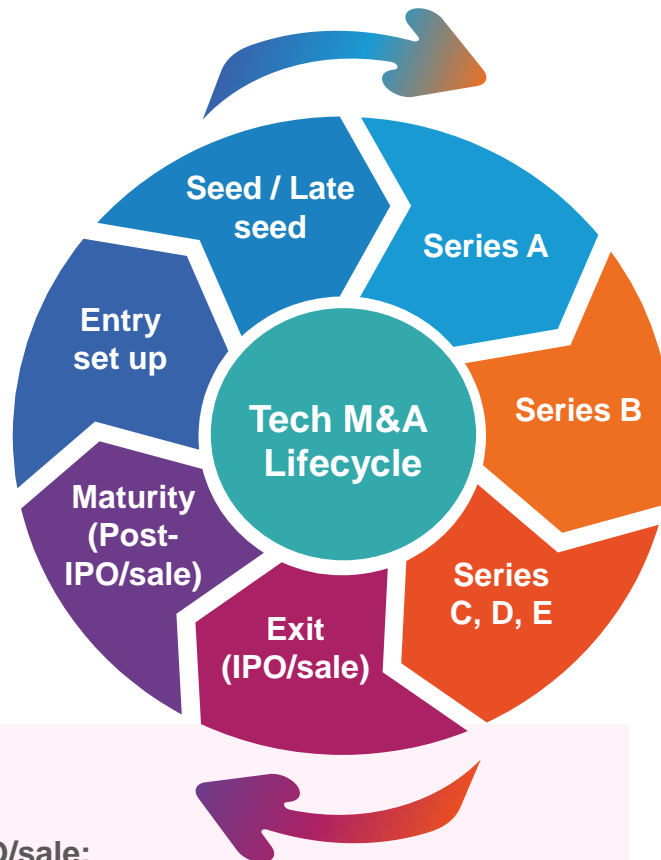

# DDE Mergers & Acquisitions Services

## Early Stage

Path to first material fundraising.

Issues include:

- IP (ownership & protection);

**“The team is highly competent. They add value at every possible opportunity and are always on standby to provide legal advice.”**

*IFLR1000 (2023)*

## DDE Mergers & Acquisitions: How we can help

### Due Diligence

Complex technology M&A transactions can be lengthy and not always black and white. As the worlds of data privacy, cybersecurity, protection and intellectual property collide, without proper due diligence – legal and technical, you may risk running into unexpected legal and financial problems or regulatory non-compliance.

Cybersecurity due diligence plays an important role in the M&A process as well. An evaluation of a target company's cybersecurity posture and experience is critical. Our cybersecurity services subsidiary, Rajah & Tann Cybersecurity Pte Ltd, will assist you in conducting the appropriate due diligence regarding security data privacy, security, open source code review, compliance issues, platforms and licensing arrangements.

Offering expertise beyond forensic aspects and traditional intellectual property due diligence, our specialist legal team understands the bigger picture and will help you evaluate and assess the risks associated with the transaction, allowing you to make better-informed decisions concerning the transaction and keep the deal moving towards successful completion. We can help you with:

- Conducting cybersecurity gap analysis;

- Providing policy advice and enhanced due diligence options in legal, cybersecurity and data governance risk management using a balanced scorecard approach;
- Due diligence review of material contracts, and key permits and licences;
- Ensuring consistency and compliance with prevailing laws and regulations; and
- Remedial work to regularise issues identified during the due diligence exercise.

### Transaction Documentation

Our extensive experience and in-depth knowledge in this area have enabled us to work on several cross-border joint ventures and M&A technology deals across Asia. We provide assistance in drafting, reviewing, and negotiating various key contracts and definitive documentation, such as investment agreements, shareholder agreements, sale and purchase agreements and business transfer agreements, from both buyer's and seller's perspectives.

To ensure a smooth transition, our team also provides transaction-related assistance, including the preparation of:

- Employment contracts, independent contractor agreements and intellectual property assignment agreements;
- Proprietary information and inventions agreements; and
- License agreements for intellectual property.

## Accolades

**Highly regarded team that leverages the strength of its network of Asian offices to handle complex cross-border M&A mandates. Active in a range of sectors, including property, manufacturing, education and healthcare, acting for major banks and corporate clients on public and private M&A transactions as well as private equity deals. Effectively leverages the firm's wider practice areas on related issues, including capital markets, finance and real estate.**

*Chambers Asia Pacific (2023)*

# DDE Mergers & Acquisitions Services

- Joint development agreements
- Consulting and professional services agreements
- Click-wrap agreements
- Online sales and service agreements
- Terms of use and privacy policies
- Beta and evaluation agreements
- Maintenance and support agreements
- Open-source license agreements and audits

## Post-Acquisition Integration

Our team understands that when a deal closes, post-acquisition integration is a crucial indicator of the overall success of an M&A transaction.

Drawing upon our in-depth knowledge of commercial practices and industry regulations, in addition to our expertise with post-acquisition compliance and processes from a technical standpoint, we help clients increase deal certainty, reduce risks and lower costs to achieve the original goals promised to shareholders.

By establishing clear objectives from the outset of the transaction, minimising risk, and pre-empting any issues that may lead to costly remedial actions, we aim to develop and execute efficient and cost-effective integration plans that not only support the deal, but also our client's future operations.

## Other Areas

We leverage the entire spectrum of our firm's practices to provide a seamless one-stop shop experience to put together the right legal team for any project, in any Asian city. Our approach is collaborative, and we will work closely with you throughout the transaction. Please find below other aspects that we cover:

- Capital Markets issues;
- Corporate and tax structuring;
- Competition and anti-trust issues;
- Employment integration issues;
- Intellectual property rights;
- Regulatory approvals.

## Accolades

**Rajah & Tann Singapore LLP is a major player in Singapore takeovers, while its dynamic regional and international profile has enabled it to land a high market share of cross-border deals, particularly in Southeast Asia; Myanmar is one particular jurisdiction where the firm has advised on a series of headline transactions.**

**The firm has achieved further prominence in REITs and trusts M&A. Healthcare, banking, and insurance M&A are also fortes for the Singapore team. The firm has an outstanding record in public M&A and competing takeovers.**

*The Legal 500 Asia Pacific (2021)*

DATA & DIGITAL ECONOMY

# Digital Media, Social Media & Online Falsehoods

*“Acts for an impressive roster of high-end domestic and multinational social media, electronics and telecoms companies...”*

*“Operates in many areas of TMT work, notably including those concerning the development of innovative technology or the digital media entertainment sphere and data protection issues”*

**Chambers Asia Pacific**

# DIGITAL MEDIA, SOCIAL MEDIA & ONLINE FALSEHOODS

Our specialist team of lawyers well versed in social media and digital media laws offers a multidisciplinary approach to assist clients of every size and stage with integrated counsel. From the earliest stages of the digital media wave, we have navigated this terrain and guided clients in the technology, entertainment, software, marketing, media, and gaming industries, across the entire spectrum of social media and digital media law.

## Our Services

While digital and social media create new markets and opportunities, they also open the door to a range of issues such as cybercrime, data protection, customer privacy, intellectual property and content regulatory compliance.

Players in the online media field also need to enhance their understanding of complications arising out of evolving services, transactions and interactions in Web 3.0 realm as its heightened usage becomes commonplace.

To assist our clients in navigating the media space, we provide end-to-end, intuitive advice on all forms of social and digital media-related matters, some of which include:

- Drafting and advising on service contracts, software integration contracts, software and content licensing and development agreements, and customer terms of use and privacy policies for digital platforms;
- Privacy and data protection provisions for customers and employees of digital media service providers;
- Digital media intellectual property protection, prosecution and advice;
- Issues related to cross border storage and transfer of data and cloud service provision; and
- Mergers & acquisitions, joint ventures and venture capital financings of digital media companies.

# Digital Media, Social Media & Online Falsehoods Services

## Procurement and Regulatory

Our specialist technology lawyers provide clients with critical guidance to ensure that their digital and social media uses comply with the existing regulations in place.

We assisted many clients from across a wide range of industries with drafting agreement terms which include but not limited to terms and conditions agreements, talent (influencers) acquisition agreements, partnership agreements, and content licensing agreements.

We further assist in submitting representations to the Media Development Authority in Singapore and other regional media regulators on behalf of our media clients pertaining to securing the necessary statutory rights to broadcast, license or distribute all forms of media both film based and digital in the Asia Pacific region.

## Litigation

Our litigation-based work spans the world. We act for clients ranging from multinational companies to startups in various media-related disputes. We bring together an unrivaled combination of industry knowledge not only to courtroom proceedings but to the risk avoidance and mitigation advice we provide clients.

The team's highly accomplished litigators with strong litigation capabilities in the digital space will help protect your business interests if and when the need arises. Our experience in the digital media space includes prosecuting parties on behalf of rights owners for infringement of the rights owners' intellectual property works, issuing takedown requests to website publishers and hosts for infringing and defamatory content, investigative and analytical work relating to objectionable social and digital media content or platforms, and managing class action litigation with social and digital media implications.

## Online Falsehoods

While the entertainment world increasingly values cross-media knowledge, along comes with it the spread of online falsehoods. To contain the spread of fake news, the Singapore government has implemented the Protection from Online Falsehoods and Manipulation Act (POFMA) and Protection from Harassment Act (POHA) which seeks to protect the society against damage from online falsehoods created by malicious actors.

Online misinformation, if left unchecked, could have disastrous and far-reaching consequences. Having advised various digital and social media companies and other internet intermediaries, we are fully equipped to advise clients on general correction or take-down directions in order to comply with POFMA and POHA, or if they have any liability or are required to assist the authorities with POHA. We constantly keep abreast on the latest regulatory developments and help our clients respond to and embrace these changes, enabling them to thrive in this new legal landscape.

## Accolades

# ELECTRONIC COMMERCE, TRADE & CONSUMER PROTECTION

In this age of the Data & Digital Economy where rapid internet and technology advancement has impacted almost every aspect of corporate and consumer behaviour, increasing accessibility and connectivity have created a strong wave of consumer outreach.

In addition to having a strong online presence to boost e-commerce sales, many companies are now adopting innovation and automation in increasingly complex and imaginative ways to engage with their clients.

With expertise spanning all our practice areas, we have a solid grasp of technology trends in the spheres of e-commerce, artificial intelligence, blockchain and fintech. We constantly keep abreast of the latest developments in the sector, and our team is fully-equipped for potential issues that may arise from the constant evolution of technology in businesses.

## Electronic Commerce, Trade and Consumer Protection Services

### Electronic Commerce

It has never been clearer that a robust digital platform and e-commerce enabled service delivery model is critical to businesses.

Our team has extensive experience in assisting clients in creating the legal terms and conditions, agreements for electronic contracting, and the proper deployment of electronic signature platforms.

They are necessary to ensure your transactions are valid and your agreements enforceable.

### Trade

The implementation of alternative supply and demand channels for businesses are crucial as a matter of contingency and future planning. Pivoting to e-commerce sale channels is but one step. For continued survival, businesses must build flexibility through diversification, and building on and managing supply chains, even as operational efficiency has seen investment in digitalisation, with new opportunities arising through digital ports and terminals.

We provide counsel and advice for all types of matters involving the import and export of goods, including origin, valuation, exporter verification, preferential treatment management, strategic goods controls, hazardous goods, licensing and permit requirements, product recalls, antidumping and safeguards, as well as trade-related contractual documentation.

### Consumer Protection

With digitalisation, businesses are now able to reach out to customers in new ways.

Businesses are already or will increasingly devise online promotions and advertising campaigns to maintain their reach to customers. Yet, consumer protection issues can be a minefield for businesses. We are familiar with consumer protection concerns on e-commerce sites and have experience with the same.

We are able to advise our clients intensively on the full spectrum of consumer protection law, including without limitation on pricing transparency, consumer safety, as well as the applicable licensing regime for consumer products. We also defend clients in investigations by the consumer protection authorities into their trade practices.

## Accolades

**“The firm took us on and moved the process authoritatively and painlessly for us in record time. They never second-guessed us at any time and have always provided us the pros and cons.”**

**“The partners who worked with us from day one are, in my view, the most professional and pleasant lawyers I have worked with. Responses to our queries are very well researched and they are very much up to date with issues that are relevant to us and our requirements.”**

*The Legal 500 Asia Pacific (2022)*

## Electronic Commerce, Trade and Consumer Protection Services

### Sustainability

With increasing concerns on ESG issues, more focus is now placed on ways to manage operations and reputation through a sustainable business strategy. Recent technological innovations have helped data centres become sustainable, and the advent of Metaverse platforms could also have significant environmental benefits. With a renewed focus on sustainability within the technology sector, Metaverse services can be leveraged as a means of offsetting carbon footprint in the real world and achieving net zero compliance requirements.

Our team of specialist corporate sustainability lawyers help corporates, investors, and financial institutions transform operations, manage risk and drive growth towards a more sustainable future. With our depth of expertise and experience, we can help you address the commercial aspects and economic objectives of the transactions.

### Cloud Computing

Cloud computing technology has reshaped the e-commerce industry, allowing businesses to save both time and resources.

Our expert team can assist as you begin your journey to find the right cloud solution that will enhance and empower your business' e-commerce site, advising on a range of matters from cloud computing contracts and transactions to data security and privacy in the cloud. We are also well versed in other technologies that can help your business grow, such as Big Data, IoT, Artificial Intelligence, etc.

For Cloud Computing Providers, we understand how imperative it is to provide a secure platform that will safeguard customers' personal data during their cloud computing sessions.

In this respect, our team works in tandem with legal tech specialists from Rajah & Tann Cybersecurity Pte. Ltd. to provide the following services:

Limiting the liability for security or risks in clouding is an important issue and you can now have a one-stop shop access to both legal and cybersecurity expertise with Rajah & Tann.

## Accolades

**“Rajah & Tann is definitely one of the leading data privacy practices in SEA. I have sought their advice on many legal issues in Singapore and other SEA countries.”**

**“Often, they were able to provide very detailed analysis that left no stone untouched.”**

**“Their assessments addressed the right concerns of the customers and were able to be implemented. The billing is reasonable and affordable.”**

*The Legal 500 Asia Pacific (2021)*

## Electronic Commerce, Trade and Consumer Protection Services

### Tax

The advent of technology has fuelled the growth of e-commerce and has changed the way in which consumers are able to purchase goods. With the rise of electronic marketplaces and platforms, businesses have a wider reach to consumers across the globe without the need to have a physical store front. The rapid growth of e-commerce has therefore led to increased scrutiny from the Singapore tax authorities, who have issued and implemented new tax regulations governing e-commerce businesses.

Our team of specialist tax lawyers can help businesses such as operators of electronic marketplaces or suppliers using these e-commerce platforms by advising them on the new Singapore tax regulations which may be relevant to them. With our depth of expertise and experience, we can help e-commerce businesses to better manage and understand their tax risks and obligations.

### Our Services

Our extensive experience with matters involving technological assets gives us the upper hand in supporting our clients with the provision of intuitive advice on all forms of e-commerce, trade, and consumer protection matters, some of which include:

- Taking brick-and-mortar businesses to the e-commerce sphere;
- Reviewing business structures to best exploit FTA benefits;
- Providing advice on ongoing import and export requirements, including other trade-related compliance issues;
- Reviewing campaigns to ensure that there are no consumer protection violations;
- Developing a consumer protection compliance process;
- Data privacy and security concerns; and
- Tax implications of e-commerce businesses.

Being part of a full-service firm with integrated practices means that our clients have access to the experience and skills of all our lawyers across the full spectrum of legal practices. Our team works closely with the other lawyers in the firm and the Rajah & Tann Asia network to provide clients with a comprehensive, multi-jurisdictional and quality service.

We are accessible whenever you need us. We work efficiently and deliver value – placing great importance on allocating the right lawyer to the right task to ensure high-quality yet cost-effective service.

Do reach out to us to find out more.

## Accolades

### Consumer Goods and Services - Outstanding

*Asialaw Profiles(2023)*

**Chambers Asia Pacific**

# FINTECH, BLOCKCHAIN & SMART CONTRACTS

**In this Data & Digital Economy, the increasing use of blockchain technology and digital assets could ultimately reshape the way many industries operate for decades to come.**

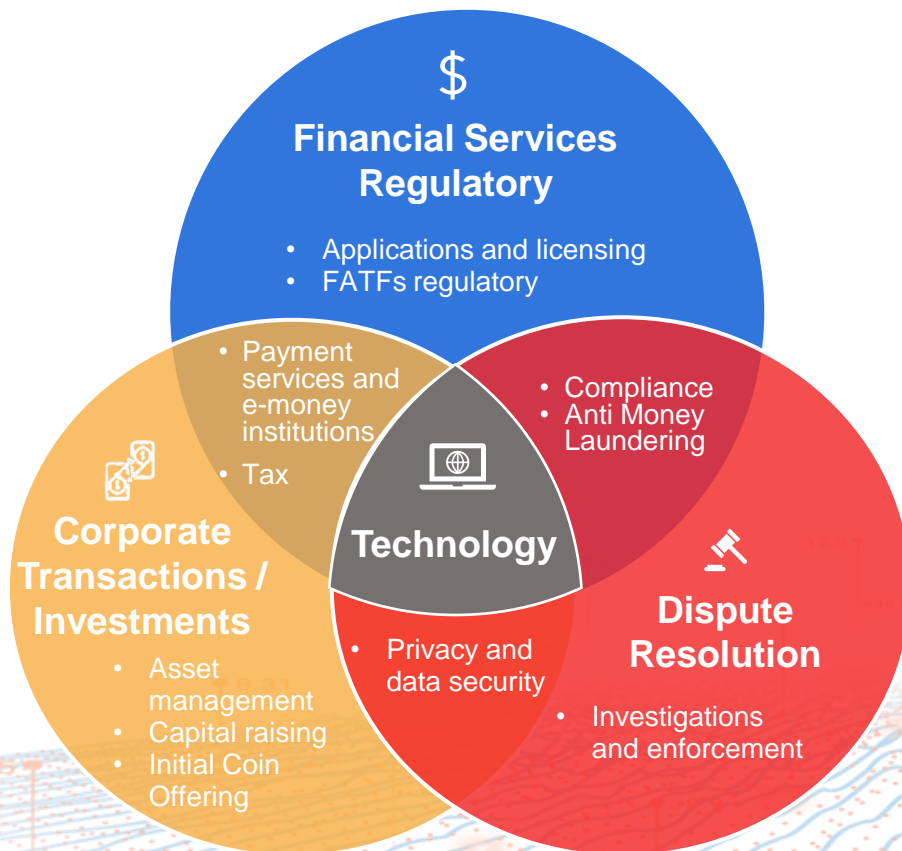

Our multidisciplinary team tracks developments affecting the blockchain and digital assets industry in order to address legal challenges and provide solutions for blockchain and digital asset development or utilisation.

Our long track record of working with block chain and other emerging technologies allows us to assist clients to pursue the untapped possibilities of block chain technology from innovative financing structures such as token generation to applications beyond cryptocurrency.

With the Metaverse is taking cyberspace by storm. along with it comes a new class of asset which has already taken shape in the form of cryptocurrencies and NFTs. Our lawyers can help you navigate your way through the world of digital assets and cryptocurrencies and assist with the legal issues that arise where the virtual and real worlds converge.

## Smart Contracts

Blockchain applications and smart contracts have also introduced automation to entirely new functions. Our lawyers are highly adept to advise on appropriate standards and protocols for the deployment of blockchain applications and smart contract coding to ensure the validity and enforceability of these smart contracts, and that confidentiality, data security and privacy obligations are upheld.

**The Legal 500 Asia Pacific (2022)**

# INTANGIBLE ASSETS, INTELLECTUAL PROPERTY & MEDIA

The Information Age has brought about a thriving Data & Digital Economy. Digital transformation and the growing embrace of IoT have seen many organisations seizing the opportunity to deliver data services, and ultimately reaping the benefits of data commercialisation.

As businesses start to amass a wealth of data, the enhancement of customer data for powerful insights and improvement of products and services becomes highly valuable.

Beyond the considerations of company data value and technology solutions, a data commercialisation strategy also requires compliance with regulatory regimes, as well as privacy and security standards.

As we approach a future in the Metaverse, new legislative models will be required. From advising on policy thinking, real-time User-Generated Content (UGC) management systems, to content licensing frameworks involving avatars, we have got you covered.

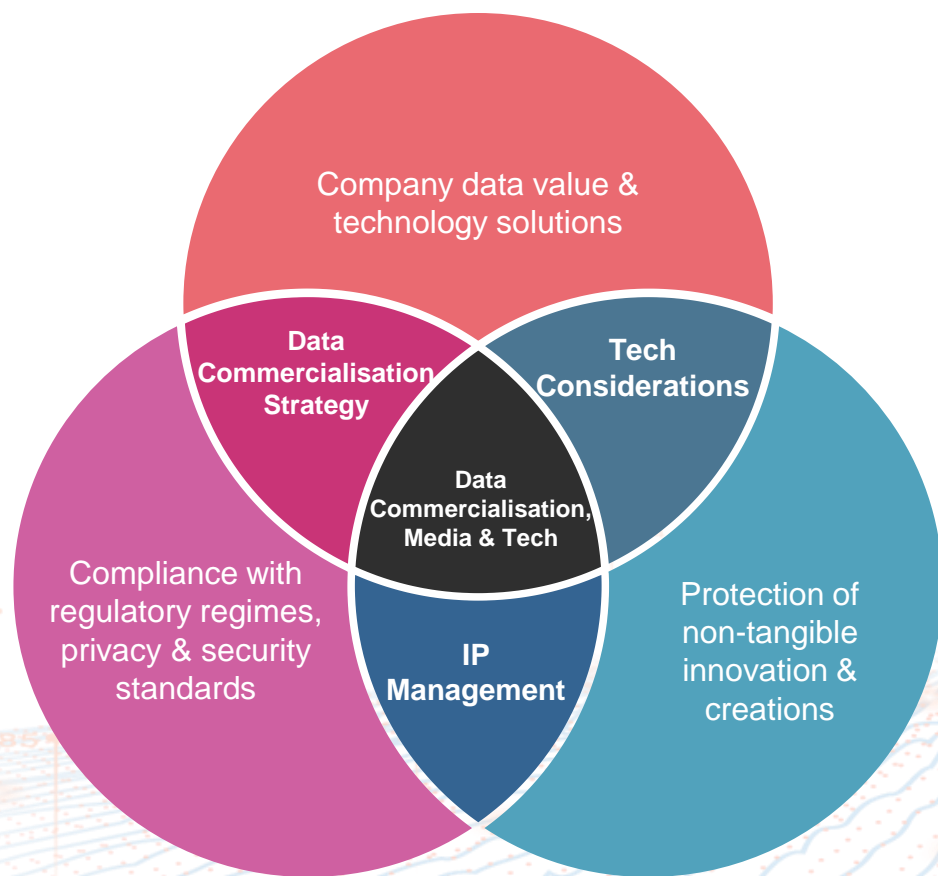

## Our Services

In coping with the ever-changing legal and regulatory landscape, the evolution of technology and business models can be potentially disruptive and challenging, particularly in the technology and media sector.

Companies are hard-pressed to keep abreast of major developments in technology as well as regulations.

We provide our clients with end-to-end and intuitive advice on all forms of data commercialisation, media, and tech matters, some of which include:

- Privacy and data protection provisions;
- Intellectual property protection, prosecution and advice;
- Transparency and protection of sensitive and confidential information;
- Licensing and commercialisation of technology, data, digital media and content, and intellectual property;
- Data acquisition and transfers;
- Trademark acquisition, licensing and prosecution; and
- Digital assets and data recovery services in the event of restructuring or insolvency.

# Intangible Assets, Intellectual Property & Media Services

## Data Commercialisation Strategy

The importance of risk and legal obligations when handling sensitive information cannot be overstated. We provide our clients with critical advice and guidance on important societal and legal questions ranging from liability, intellectual property, data protection and even fundamental rights, enabling our clients to develop an overarching data commercialisation legal strategy.

## Digital Asset Management, Tokenisation, and IP Rights

With the Metaverse on the horizon, transactions involving non-fungible tokens (NFTs) are surging to new highs. The team understands that creating and trading digital assets and experiences from the creator economy is not as straightforward as that of a physical one, and various IP issues may arise from the purchase and sale of NFTs.

From digital asset securitisation, blockchain custodian services, virtual real estate asset protection, and gaming loot commercialisation, our team is well-versed in all aspects involved to handle this multi-faceted work.

## Technological Considerations

To drive significant growth in data commercialisation, a combination of major technological developments and strategies is often used to get the most out of data and digital assets. To capitalise on new revenue streams, it is critical to keep pace with the evolving technologies in today's fast-moving business environment.

In keeping our finger on the pulse of the latest developments, we are able to navigate these waters and help our clients respond to and embrace these changes.

The team is also able to assist in enhancing the value of distressed assets by creating parallel value by tokenisation, for instance through the creation of NFTs.

## Intellectual Property Management

The speed at which technology develops and the increasingly competitive atmosphere in the digital arena call for effective management of intellectual property portfolios to ensure our clients' assets are kept well and secure.

We assist clients with IP registration, licensing, transfer, prosecution, watches and searches, and filing, amongst others.

## Accolades

**Rajah & Tann Singapore's established IP law department is involved with contentious and non-contentious cases concerning patents, trade marks and copyrights.**

**Well known for advising clients on IP licensing and brand protection, and advises on transactional deals in relation to the transfer and licensing of IP rights.**

*Chambers Asia Pacific (2023)*

**Rajah & Tann Singapore fields a team with seasoned lawyers who are well placed to provide expertise on telecoms and technology regulatory matters as well as licensing, data protection and data centre projects.**

**Acts for an impressive roster of high-end domestic and multinational social media, electronics and telecoms companies.**

*Chambers Asia Pacific (2022)*

DATA & DIGITAL ECONOMY

# Privacy, Data Protection & Data Governance

*“Well-reputed, advises on data breaches, conducting investigations and internal audits of compliance with data protection law.”*

*“Increasingly sought to provide advice in relation to cybersecurity issues.”*

**Chambers Asia Pacific (2021)**

*“Known for expertise in cybersecurity and data protection.”*

*“Frequently engaged by blue-chip clients to assist on data misuse issues, data storage, and data protection drafting.”*

**The Legal 500 Asia Pacific (2021)**

## Privacy, Data Protection & Data Governance Services

We are always at the forefront of legal innovation, legal understanding and legal services. Whether it is grappling with digital-related technology issues, artificial intelligence, big data, or the metaverse, we are there to guide and advise organisations in navigating laws relating thereto and in their commercialization activities.

We have further distinguished ourselves with the creation of a unique legal and technical ecosystem with the setting up of separate companies: Rajah & Tann Technologies Pte. Ltd.; and Rajah & Tann Cybersecurity Pte. Ltd.

By engaging with us, clients have the benefit of receiving seamless legal and technical services in the privacy, data protection and data governance space. For example, this unique combination of both legal and technical services that complete the data breach preparedness and response ecosystem services that we provide assures clients that their data-related problems, incidents and issues are handled by a best-of-breed multi-disciplinary legal cum technical team.

### Data Breach Readiness and Response / Data Protection Officer Services

A data breach can arise from many causes such as an intentional hacking attack, employee mischief or neglect, inadvertent leak, lack of or failure in security measures, equipment failure, human error, etc. It is no longer a question of preventing data breaches but of whether one can effectively handle a data breach when it occurs. With data continuing to be a key asset and operational currency of any organisation, it is of paramount importance for an organisation to assess its readiness in dealing with a data breach and effectively deal with it when a breach does happen. Our Data Breach Readiness and Response Services are designed to meet and deal with the heightened risk and increasing occurrences of data breaches in organisations across every industry.

### Data Governance

Even with having a good data commercialisation strategy in place, companies may find themselves stuck in the compliance and governance phase rather than commercialisation itself. To maximise data potential and seize opportunities, a strong data governance framework is critical to data commercialisation.

The majority of successful data commercialisation efforts are reinforced by fit-for-purpose frameworks. Our team of adept data specialists is well-placed to identify potential gaps in laws and regulations, determine what solutions are required to deal with these gaps, and to ensure that businesses are in compliance with the law.
